on Sustainability (MARS)

# Land and food:

Shaping the Luxembourgish Agricultural System for the agenda 2030

## LUNCH DEBATE

12.15-13.45  
**Wednesday 20<sup>th</sup> November**  
CARITAS LUXEMBOURG

29 rue Michel Welter  
L-2730 Luxembourg

2019

### SPEAKERS

#### Weichold Ivonne

Ivonne Weichold is an architect, urbanist and currently a doctoral researcher at the University of Luxembourg. Her PhD research breaks open the duality of thinking in urban and rural environments in order to investigate the intertwined role of agricultural land and production and urban planning in wealthy economies. (<http://masterarchitecture.lu>)

During this lunch debate, she will critically discuss a "best case" scenario concerning an alternative land configuration in Luxembourg. Contribution will be made by repositioning agricultural in planning through underlining it with concrete examples from other parts of the world.

#### Stoll Evelyne

Evelyne Stoll (MRes) works at the Research and Development department of the Institute for organic agriculture a.s.b.l. (IBLA), where she focusses her efforts on sustainability assessments at farm- and at food system-level. She is the principal investigator of the project SustEATable (2018-2021), in which sustainable farming practices and dietary habits needed for the establishment of sustainable food systems in Luxembourg are being investigated. She will present preliminary results from this study and discuss them in the wider context of current environmental and socio-economic challenges of the food system: why do we need changes in our food system? How can farmers be part of the solution? What responsibility befalls the consumer?

Registration [here](#)  
until 18<sup>th</sup> November.
